

VPN Installation Instruction for Andriod

On Android (such as Samsung, LG, HTC, Oppo, etc), you cannot connect VPN via Browser (such as Internet Explorer, Google Chrome, Firefox, etc.) directly like connecting on Personal Computers (PC). For this case, we have to use an application called Junos Pulse which you can download from Play Store.

Junos Pulse Installation and setting

1. First, find Play Store (Internet connection required) If you do not know where it is you can find it from “Apps” icon as in (For this manual I use Samsung brand for an example, so the Apps icon will be on the bottom right. Apps icon on the other brands may look and may be placed in different location depending on each manufacturer)

2. Find and open Play Store

3. In Search box type “junos pulse”

4. Tap Install

5. Usually after finished installation, your phone will automatically create a shortcut on your blank space on a screen. However, If you cannot find it or you do not have any blank space left, you can still find it in 'Apps'

6. Open Junos Pulse then choose 'Connections'

7. Fill your information in the blank like the example in the Picture 8
- Connection Name: Anything you want, but I suggest that the name should indicate the place where you are connecting to (for example, in this case I use "vpn mahidol")
 - Url: type in <https://vpn.mahidol.ac.th> (do not forget the "s" in "https")
 - ** Username: has to be your Internet account you received from the university; firstname.sur (firstname + dot + first 3 letters of your surname) for personnel and uxxxxxxx or gxxxxxxx for students **No need to put '@mahidol.ac.th' after that** ** In this example I use "Sample"

After you fill in all necessary information (no need to fill in 'Realm' and 'Role') choose 'Create Connection'

New Connection

Connection name
vpn mahidol

Url
https://vpn.mahidol.ac.th

Username
sample

Uses Certificate

Realm

Role

Create Connection

No Session

8. After create connection, it will go back to the front page, choose Connect to start the VPN connection

JUNOS PULSE

VPN Security

Connections
vpn mahidol

Status
No Session

Connect

- In 'Select Connection', choose which VPN you want to connect in case you have many VPN connections (for this case choose vpn mahidol). Fill in username and password (from the university's Internet account; firstname.sur for personnel and uxxxxxx or gxxxxxx for students) then 'Log In'

- Check 'I trust this application' then OK

11. 'Status' will change to 'Authenticated /VPN: Connected' (Picture 12), if the system signs in successfully.
